Dentsply Sirona Introduces SDR® flow+ Bulk Fill Flowable Material
All the benefits of SDR® technology plus expanded indications, more shades, improved wear resistance and increased radiopacity.

Constance, March 15th, 2017 - Dentsply Sirona is proud to introduce the next generation of its industry-leading SDR® bulk fill technology. The new SDR® flow+ delivers all the proven benefits of SDR® technology for Class I and II restorations while expanding the range of indications to include Class III and V. With increased wear-resistance, three additional shades (A1, A2, and A3) and increased radiopacity, SDR® flow+ bulk fill flowable is the most versatile material available for creating faster, easier, more reliable restorations.

Based on the unmatched properties of SDR® bulk fill technology
SDR® technology from Dentsply Sirona provides an unmatched combination of flowable consistency, excellent cavity adaptation, unique self-leveling and minimal shrinkage stress. With more than 50 million applications and superior performance in 5- and 6-year clinical studies, the SDR® is the world’s most researched and clinically proven bulk fill flowable technology.

Dentists can bulk fill up to 4mm deep to perform faster, easier Class I and II procedures without affecting the durability and longevity of the restoration. The handling properties of SDR® technology also make it ideal for several other indications including treatment of primary posterior dentition, pit and fissure sealing, post-endodontic restorations and even core build-up.

Now offering greater versatility and improved outcomes
Based on SDR® technology, Dentsply Sirona now is introducing the next generation bulk fill flowable with a new formulation. SDR® flow+ bulk fill flowable provides:

- **Three additional shades**, A1, A2 and A3, to simplify esthetic matching in a wider range of applications.
- **Enhanced wear resistance** with a modified glass filler package that significantly increases durability.
- **Increased radiopacity** to provide improved X-ray visibility.

With these enhancements, SDR® flow+ bulk fill flowable is now approved for an expanded range of indications including Class III and V restorations in addition to Class I and II. The new shades also provide dentists with additional esthetic options for creating Class V and Class II restorations as well as primary posterior dentition when the restoration is visible at the smile line.

ABOUT DENTSPLY SIRONA:
Dentsply Sirona is the world’s largest manufacturer of professional dental products and technologies, with a 130-year history of innovation and service to the dental industry and patients worldwide. Dentsply Sirona develops, manufactures, and markets a comprehensive solutions offering including dental and oral health products as well as other consumable medical devices under a strong portfolio of world class brands. As The Dental Solutions Company™, Dentsply Sirona’s products provide innovative, high-quality and effective solutions to advance patient care and deliver better, safer and faster dentistry. Dentsply Sirona’s global headquarters is located in York, Pennsylvania, and the international headquarters is based in Salzburg, Austria. The company’s shares are listed in the United States on NASDAQ under the symbol XRAY. Visit [www.dentsplysirona.com](http://www.dentsplysirona.com) for more information about Dentsply Sirona and its products.
While SDR® flow+ material offers greater versatility, durability and radiopacity, it still retains all the benefits that have established SDR® technology as the gold standard for quality and efficiency in the bulk fill category.

When used with the Palodent® V3 sectional matrix system, Prime&Bond active™ universal adhesive and ceram.x® universal nano-ceramic restorative, SDR® flow+ material is part of a complete procedural solution for Class II restorations. Dentsply Sirona has optimized these products to provide confident and controlled results at each step of the Class II procedure, from accurate contact creation to esthetic shade matching.
